Abstract

The technical journal articles, books, and symposia papers in the area of Radar Absorbing Materials (RAM) have been identified from 1956 to 1993. A classification of the primary and secondary theme of these papers based on the initial survey of the papers by the CEM & RCS Lab. of NAL is also provided. This is followed by the Author Index, a Source Index and finally a detailed Subject Index based on Key words. This document seeks to explore (i) the historical developments, (ii) the current status, (iii) names of existing RAMs, and (iv) the trends in RAM.
